

Mindful Moments Reliability Evaluation

Oct 4, 2026 · Sheila Nduta Kinuriu

Overview

This evaluation documents the reliability of each of the 5 Key Market Insights produced by the Market Intelligence Agent, before those insights were carried into the Market Intelligence Brief. For each insight it records the specific evidence source, the gaps or assumptions behind it, an explicit confidence rating (High/Medium/Low), and its concrete limitations — the detail that the Brief’s own Confidence Assessment table summarizes at a glance. This document is the reliability evaluation deliverable referenced in the project’s final submission, alongside the Market Analysis and the Brief.

Per-Insight Reliability

Insight	Evidence Source	Gaps / Assumptions	Confidence	Limitations
1. Market is ~\$2.2B (2025), growing to \$7-10B by early 2030s (15-18% CAGR)	External Quick Research (one pass); cross-checked directionally against high install volumes for HEALTH_AND_FITNESS apps in the dataset	Assumes the external research’s market-sizing methodology is sound; no second external source to triangulate against	Medium	Single-source external figure; dataset used only as a directional, not quantitative, check
2. Calm (~180M downloads, ~\$7.9M/mo) and Headspace (~105M downloads, ~\$3.9M/mo) lead; top 5 hold only ~15% combined share	External Quick Research, named figures per competitor	Assumes reported download/revenue figures are current and accurate; “top 5” boundary as defined by the research, not independently re-derived	High	Revenue figures for private apps are estimates, not audited financials

Insight	Evidence Source	Gaps / Assumptions	Confidence	Limitations
3. Annual subscription pricing has converged to \$60-70/year across leading apps	External Quick Research, competitor pricing pages (Calm, Headspace, Balance, Insight Timer, Aura, Waking Up)	Assumes list prices quoted reflect what most subscribers actually pay (ignores discounts, regional pricing, promotions)	Medium	List prices change without notice; only 6 competitors sampled
4. Insight Timer has the largest free library (350,000+ practices) and competes on breadth	External Quick Research; corroborated by dataset's Type (Free) and Installs fields for comparable free apps	Assumes the dataset's free/paid install patterns from 2018 still hold directionally today	Medium	Dataset is a 2018 snapshot; external figure has no independent second source
5. User sentiment favors reliability/simplicity; negative sentiment clusters on stability and billing, not content gaps	Dataset's own user review sentiment fields (Sentiment, Sentiment_Polarity) for comparable HEALTH_AND_FITNESS apps	Assumes sentiment patterns in reviews of OTHER apps generalize to how users would judge Mindful Moments specifically	Low	Internal dataset only, no external corroboration; dataset is dated (2018); reviews are for other apps, not primary research on Mindful Moments' target users
