

README

Mindful Moments: Market Intelligence Agent

An AI-powered market research agent built in **Amazon QuickSuite**, created as a Udacity project. It analyzes the meditation and mindfulness app market to inform go-to-market decisions for **Mindful Moments**, a mental wellness app I'm designing for a UI/UX internship.

The Business Question

Should Mindful Moments enter the meditation/mindfulness app market, and if so, how should it price and position itself against established players like Calm and Headspace?

How It Works

1. **Dataset** - the Google Play Store Apps dataset (~10,800 apps + 64,000 user reviews) was uploaded to a QuickSuite Space as an internal knowledge source.
2. **Agent** - a Chat agent ("Market Intelligence Agent – Mindful Moments") was configured to analyze the dataset and distinguish internal, data-driven findings from external research.
3. **Quick Research** - used to gather external signals on market size, competitor pricing, and growth trends.
4. **Market Analysis** - the agent synthesized both sources into 5 key insights with supporting evidence.
5. **Reliability Evaluation** - each insight was scored for confidence (High/Medium/Low) based on source quality, consistency, and timeliness.
6. **Market Intelligence Brief** - a final executive-ready brief summarizing findings, confidence levels, limitations, and strategic implications.

What's in This Repo

Folder	Contents
<code>/data</code>	The Google Play Store datasets used as the internal knowledge source
<code>/research</code>	Quick Research output on the competitive landscape
<code>/reliability-evaluation</code>	Per-insight reliability evaluation (evidence source, gaps, confidence, limitations)
<code>/market-intelligence-brief</code>	The final Market Intelligence Brief
<code>/screenshots</code>	Agent setup, Quick Research, and Space screenshots

Key Insights (Summary)

1. The meditation/mindfulness app market is large and still growing fast (~\$2.2B → \$7-10B by the early 2030s).
2. Calm and Headspace dominate downloads and revenue, but the broader market is highly fragmented.
3. Annual subscription pricing has converged to a \$60-70/year norm across leading apps.
4. Insight Timer's free-tier scale shows freemium is a viable path to install growth.
5. User sentiment in the category rewards reliability and simplicity over content volume.

See the full Brief for evidence, confidence ratings, and strategic implications.

Tools Used

- Amazon QuickSuite (Chat agent, Quick Research)
- Kaggle's Google Play Store Apps dataset

Note

This is a course project built on a fictional business scenario for Mindful Moments, which is an app concept I'm designing independently.
